

All organic Zero-HEDP formulations

Solugen

The **first** carbon negative molecule factory. The **only** synbio process that can scale to meet the world's needs.

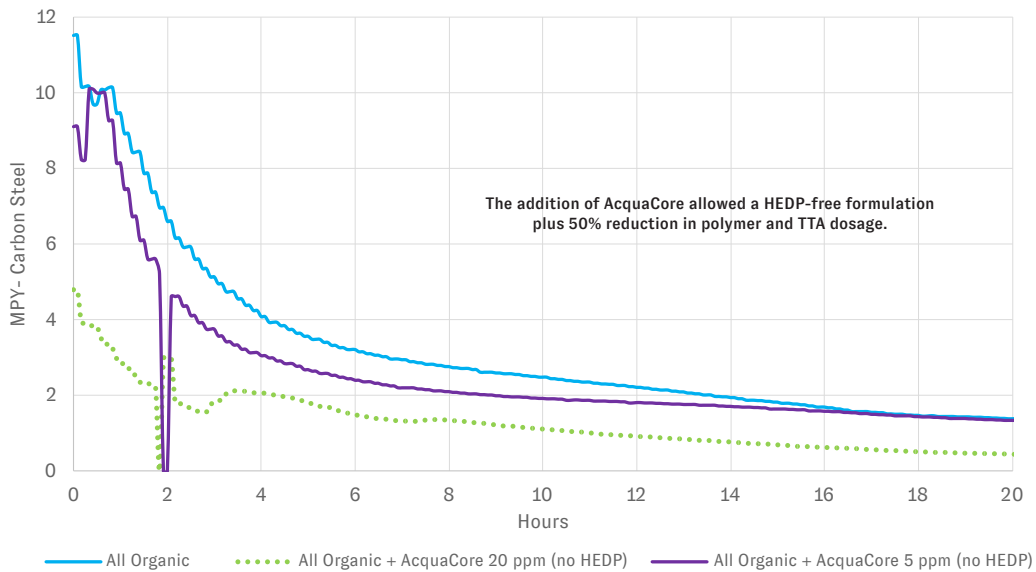

Transforming water treatment programs from the core.

The AcquaCore™ Series enable high-performance water treatment formulations with improved environmental profile.

Looking to formulate less toxic water treatment programs with improved performance?

In all organic formulations HEDP is a common component. For every ton of AcquaCore or AcquaCoreX used to replace HEDP, more than three tons of greenhouse gas equivalents are reduced.

While the GHG benefits of using the AcquaCore series are remarkable, the abilities of these technologies to manage ions such as Fe^{+3} , Cu^{+2} , Al^{+3} , and Mn^{+2} are critical to enable high-performance water treatment programs.

Additive PPM Active	All Organic	All Organic + AcquaCore	All Organic + AcquaCore
HEDP	6	0	0
PBTC	6	6	6
Acrylate Copolymer	10	5	5
TTA	3	1.5	1.5
AcquaCore Series	0	5	20

Test conditions: Temp 40C, Water cut 100%, rotation speed 200 rpm, air as purge gas, electrode material C1018
